Account History & Compliance Notes

Reference: EU-A-A2-000057 • Classification: RESTRICTED — COMPLIANCE TEAM ONLY • 2026-04-15

Initial contact was made through the regional sales team following attendance at an industry conference. The prospect expressed specific interest in the analytics module, and the license scope was deliberately narrowed during negotiations to exclude certain data export functionalities that raised regulatory concerns in the client's jurisdiction. Legal sign-off from the client's privacy counsel was a condition precedent to execution.

Usage logs obtained during the Q2 2025 compliance review indicated that the integration layer was being accessed by a third-party contractor engaged by CoreCorp, which was not disclosed as a permitted sub-user in the original agreement. The client was notified via formal letter and subsequently provided written confirmation that the contractor access had been terminated and access credentials revoked.

The license was formally revoked following the client's failure to cure material breaches identified across successive audit cycles. The decision was made by the Regional Compliance Committee after a final review meeting in which CoreCorp's legal representative was given the opportunity to present mitigating circumstances. The committee determined that the accumulated non-conformances, combined with the absence of a credible remediation roadmap, warranted revocation rather than a further suspension period.

The pricing structure for this account reflects a negotiated discount agreed in exchange for a multi-year commitment and the client's participation as a reference customer. The commercial terms are subject to a utilisation-linked review mechanism that was included at the client's request during the original negotiation.

From a technical standpoint, the deployment has been stable with no major service incidents reported to the support function. The client completed the mandatory security configuration review within the required timeframe and holds a current penetration test certificate on file. Integration with their existing identity management infrastructure was completed without material issues.
