Account History & Compliance Notes

Reference: EU-B-B2-000368 • Classification: RESTRICTED — COMPLIANCE TEAM ONLY • 2026-04-15

The account was originally onboarded through a referral from a channel partner, following a competitive procurement process in which three other vendors were evaluated. The initial engagement was preceded by a four-month pilot programme limited to the engineering team, during which the licensee demonstrated satisfactory technical integration capabilities and a genuine commitment to compliance onboarding requirements.

Usage logs obtained during the Q1 2024 compliance review indicated that the integration layer was being accessed by a third-party contractor engaged by BetaGroup, which was not disclosed as a permitted sub-user in the original agreement. The client was notified via formal letter and subsequently provided written confirmation that the contractor access had been terminated and access credentials revoked.

The audit concluded with a pass rating subject to three observations. First, the incident response plan had not been updated to reflect recent organisational changes. Second, training records for two staff members with elevated system access could not be produced on request. Third, the annual penetration test report was overdue at the time of the audit. The client acknowledged all three observations and submitted a corrective action plan within the required timeframe.

Based on the account history and current risk profile, the recommendation is to proceed with renewal subject to the inclusion of enhanced audit rights provisions and a requirement for quarterly self-attestation reporting. The commercial team has been briefed on these conditions.

The account is subject to an enterprise pricing agreement that was last formally benchmarked against market rates in 2020. Given the client's growth trajectory and changes in the competitive landscape, a commercial review has been flagged as a priority item for the next account management planning cycle.
