Account History & Compliance Notes

Reference: EU-B-B2-000398 • Classification: RESTRICTED — COMPLIANCE TEAM ONLY • 2026-04-15

The account was migrated from a legacy reseller arrangement in 2023 when the original distribution partner ceased operations. The transition was managed by the regional partner success team and involved re-signing the master license agreement with updated data processing terms. Several weeks of parallel access were provided to allow the client to verify continuity of service before the legacy arrangement was formally terminated.

The support team has been the primary user base since initial deployment, with occasional cross-departmental access granted on an ad-hoc basis by the client's internal IT administrator. The compliance team has repeatedly noted the absence of a formal internal user provisioning process at the client side, which creates tracking difficulties and was cited as a control weakness in the last two consecutive audit cycles.

Technical support interactions have been moderate in volume, primarily relating to API rate configuration and user provisioning workflows. No severity-one incidents have been logged against this account during the current contract period. The client's technical team has been responsive to security advisories and has applied critical patches within the recommended remediation windows.

The audit concluded with a pass rating subject to three observations. First, the incident response plan had not been updated to reflect recent organisational changes. Second, training records for two staff members with elevated system access could not be produced on request. Third, the annual penetration test report was overdue at the time of the audit. The client acknowledged all three observations and submitted a corrective action plan within the required timeframe.
