Account History & Compliance Notes

Reference: US-A-A5-000265 • Classification: RESTRICTED — COMPLIANCE TEAM ONLY • 2026-04-15

The account was migrated from a legacy reseller arrangement in 2022 when the original distribution partner ceased operations. The transition was managed by the regional partner success team and involved re-signing the master license agreement with updated data processing terms. Several weeks of parallel access were provided to allow the client to verify continuity of service before the legacy arrangement was formally terminated.

Utilisation patterns reviewed during the Q2 2025 audit revealed that actual seat consumption peaked at 525 concurrent users, significantly below the 1000 seats contracted. The compliance team flagged this underutilisation in their quarterly review report and recommended initiating a commercial renegotiation to right-size the license, though the account manager advised against it given the client's stated expansion plans for the following fiscal year.

The compliance team recommends maintaining the current monitoring frequency for this account and scheduling a structured review meeting with the client's compliance function to address the outstanding items. A detailed remediation tracking log should be maintained by the assigned compliance officer until all open points are formally closed.

The software deployment is operating on a version that is approaching end-of-support status. The client has been formally notified and has indicated an intention to plan the upgrade within the next scheduled maintenance window. This item is tracked in the account risk register and will be verified at the next scheduled technical check-in.

From a commercial perspective, the account has historically maintained a good payment record, with the exception of a brief late-payment episode in 2022 that was attributed to a treasury system transition at OmegaPartners. A late payment charge was waived as a goodwill gesture given the client's otherwise clean financial history with the organisation.
