Account History & Compliance Notes

Reference: US-B-B6-000696 • Classification: RESTRICTED — COMPLIANCE TEAM ONLY • 2026-04-15

The account was originally onboarded through a referral from a channel partner, following a competitive procurement process in which three other vendors were evaluated. The initial engagement was preceded by a four-month pilot programme limited to the product team, during which the licensee demonstrated satisfactory technical integration capabilities and a genuine commitment to compliance onboarding requirements.

Usage logs obtained during the Q2 2025 compliance review indicated that the integration layer was being accessed by a third-party contractor engaged by OmegaDigital, which was not disclosed as a permitted sub-user in the original agreement. The client was notified via formal letter and subsequently provided written confirmation that the contractor access had been terminated and access credentials revoked.

Technical support interactions have been moderate in volume, primarily relating to API rate configuration and user provisioning workflows. No severity-one incidents have been logged against this account during the current contract period. The client's technical team has been responsive to security advisories and has applied critical patches within the recommended remediation windows.

Renewal documentation is currently in the final legal review stage. The delay has been attributed to an internal organisational restructuring that resulted in the departure of the original contract owner, requiring a newly appointed responsible manager to complete a full review of the existing terms before authorising execution.
