Account History & Compliance Notes

Reference: US-A-A6-000339 • Classification: RESTRICTED — COMPLIANCE TEAM ONLY • 2026-04-15

This client relationship originated from an inbound request submitted via the partner portal in 2023. The legal onboarding process took approximately eleven weeks due to prolonged negotiations over data processing addenda, particularly around sub-processor disclosure obligations and the scope of the audit rights clause. Several rounds of redlines were exchanged before a mutually acceptable version of the data processing agreement was finalised.

Review of the access logs indicated consistent usage during standard business hours in the declared jurisdiction, with no anomalous off-hours activity detected. The IP binding configuration was verified as correctly matching the declared address ranges, and no sessions originating from unexpected geographic locations were identified during the monitoring window.

Technical support interactions have been moderate in volume, primarily relating to API rate configuration and user provisioning workflows. No severity-one incidents have been logged against this account during the current contract period. The client's technical team has been responsive to security advisories and has applied critical patches within the recommended remediation windows.

From a commercial perspective, the account has historically maintained a good payment record, with the exception of a brief late-payment episode in 2023 that was attributed to a treasury system transition at CyberWorks. A late payment charge was waived as a goodwill gesture given the client's otherwise clean financial history with the organisation.

The review status was triggered by a routine screening process that identified a potential exposure risk associated with a recent change in CyberWorks's beneficial ownership structure. The compliance team is working with external legal counsel to assess the materiality of the situation and determine whether continued licensing is permissible under applicable regulatory requirements.
