Account History & Compliance Notes

Reference: US-C-C5-000942 • Classification: RESTRICTED — COMPLIANCE TEAM ONLY • 2026-04-15

The account was migrated from a legacy reseller arrangement in 2020 when the original distribution partner ceased operations. The transition was managed by the regional partner success team and involved re-signing the master license agreement with updated data processing terms. Several weeks of parallel access were provided to allow the client to verify continuity of service before the legacy arrangement was formally terminated.

The it team has been the primary user base since initial deployment, with occasional cross-departmental access granted on an ad-hoc basis by the client's internal IT administrator. The compliance team has repeatedly noted the absence of a formal internal user provisioning process at the client side, which creates tracking difficulties and was cited as a control weakness in the last two consecutive audit cycles.

Given the pattern of recurring minor non-conformances, the account has been designated for an enhanced compliance engagement programme for the next review period. This will involve increased audit frequency and mandatory participation in compliance briefings provided to the client's relevant staff.

The account is subject to an enterprise pricing agreement that was last formally benchmarked against market rates in 2020. Given the client's growth trajectory and changes in the competitive landscape, a commercial review has been flagged as a priority item for the next account management planning cycle.

From a technical standpoint, the deployment has been stable with no major service incidents reported to the support function. The client completed the mandatory security configuration review within the required timeframe and holds a current penetration test certificate on file. Integration with their existing identity management infrastructure was completed without material issues.
