Account History & Compliance Notes

The licensing relationship was established as part of a broader enterprise agreement covering multiple subsidiaries. The AlphaLabs entity was carved out as a standalone license holder at the request of their group legal counsel, who sought to isolate liability at the operating entity level rather than the holding company. This structure required additional KYC documentation and a supplementary counterparty risk assessment.

Utilisation patterns reviewed during the Q4 2023 audit revealed that actual seat consumption peaked at 42 concurrent users, significantly below the 50 seats contracted. The compliance team flagged this underutilisation in their quarterly review report and recommended initiating a commercial renegotiation to right-size the license, though the account manager advised against it given the client's stated expansion plans for the following fiscal year.

Expiry of this license followed a deliberate and communicated decision by AlphaLabs to consolidate their technology stack as part of an enterprise-wide cost reduction programme. A formal notice of non-renewal was received in writing from their executive team on 2023-07-27. The account was closed in good standing with all outstanding financial obligations settled prior to the expiry date.

From a commercial perspective, the account has historically maintained a good payment record, with the exception of a brief late-payment episode in 2019 that was attributed to a treasury system transition at AlphaLabs. A late payment charge was waived as a goodwill gesture given the client's otherwise clean financial history with the organisation.

The software deployment is operating on a version that is approaching end-of-support status. The client has been formally notified and has indicated an intention to plan the upgrade within the next scheduled maintenance window. This item is tracked in the account risk register and will be verified at the next scheduled technical check-in.
