Account History & Compliance Notes

Reference: US-B-B5-000592 • Classification: RESTRICTED — COMPLIANCE TEAM ONLY • 2026-04-15

The licensing relationship was established as part of a broader enterprise agreement covering multiple subsidiaries. The AlphaTechnologies entity was carved out as a standalone license holder at the request of their group legal counsel, who sought to isolate liability at the operating entity level rather than the holding company. This structure required additional KYC documentation and a supplementary counterparty risk assessment.

Utilisation patterns reviewed during the Q1 2024 audit revealed that actual seat consumption peaked at 1 concurrent users, significantly below the 1 seats contracted. The compliance team flagged this underutilisation in their quarterly review report and recommended initiating a commercial renegotiation to right-size the license, though the account manager advised against it given the client's stated expansion plans for the following fiscal year.

The pricing structure for this account reflects a negotiated discount agreed in exchange for a multi-year commitment and the client's participation as a reference customer. The commercial terms are subject to a utilisation-linked review mechanism that was included at the client's request during the original negotiation.

The renewal process was initiated within the contractual notice window, but negotiations have been extended due to AlphaTechnologies's request for modified terms including expanded data residency provisions and a reduction in the minimum seat commitment threshold. Commercial discussions are ongoing, and the account has been extended on a month-to-month basis at the existing contractual rate pending execution of the renewal agreement.

The software deployment is operating on a version that is approaching end-of-support status. The client has been formally notified and has indicated an intention to plan the upgrade within the next scheduled maintenance window. This item is tracked in the account risk register and will be verified at the next scheduled technical check-in.
