Account History & Compliance Notes

Reference: US-B-B6-000646 • Classification: RESTRICTED — COMPLIANCE TEAM ONLY • 2026-04-15

The licensing relationship was established as part of a broader enterprise agreement covering multiple subsidiaries. The CyberSystems entity was carved out as a standalone license holder at the request of their group legal counsel, who sought to isolate liability at the operating entity level rather than the holding company. This structure required additional KYC documentation and a supplementary counterparty risk assessment.

Usage logs obtained during the H1 2024 compliance review indicated that the integration layer was being accessed by a third-party contractor engaged by CyberSystems, which was not disclosed as a permitted sub-user in the original agreement. The client was notified via formal letter and subsequently provided written confirmation that the contractor access had been terminated and access credentials revoked.

Integration complexity at this account is above average, reflecting the client's bespoke data architecture and the custom connector configurations agreed as part of the original deployment engagement. These configurations have been fully documented and are maintained by the assigned technical account specialist.

No material concerns are currently flagged for this account. Standard renewal processing is recommended. The account manager has been advised to use the upcoming renewal engagement as an opportunity to discuss the client's forward roadmap and assess scope for appropriate expansion of the licensed services.
